Neuropsychological testing, also known as psychometric testing, is a comprehensive evaluation of cognitive, motor and behavioral functional abilities related to developmental, degenerative and acquired brain disorders. This testing may be used to augment a comprehensive medical history and physical examination, as well as a neurological investigation of certain conditions. Neuropsychological testing is considered medically necessary when there is evidence to suggest that the test results will have a timely and direct impact on the member's treatment plan for certain indications. Repeat testing to track the status of an illness or the recovery progress is subject to individual case consideration but is generally not warranted.

Clinical information

Please include any relevant medical records to support the request for testing. Select all that apply.

<input type="checkbox"/> Traumatic brain injury, date: _____	<input type="checkbox"/> Encephalitis, date: _____	<input type="checkbox"/> Epilepsy and cognitive impairment suspected or documented, date: _____	<input type="checkbox"/> Multiple sclerosis and suspected or demonstrated cognitive impairment, date: _____
<input type="checkbox"/> Anoxic/hypoxic brain injury, date: _____	<input type="checkbox"/> Cerebral vascular accident, date: _____	<input type="checkbox"/> Psychosis, date: _____	<input type="checkbox"/> Major affective disorder, date: _____
<input type="checkbox"/> History of intracranial surgery, date: _____	<input type="checkbox"/> Brain tumor in remission or with slow progression, date: _____	<input type="checkbox"/> Neurosurgery planned for epilepsy control, date: _____	<input type="checkbox"/> Head injury with loss of consciousness, date: _____
